Abstracts

According to our (Global Info Research) latest study, the global Magnetron market size was valued at USD 1528 million in 2023 and is forecast to a readjusted size of USD 1794.8 million by 2030 with a CAGR of 2.3% during review period.

A magnetron is a device that uses the interaction of a stream of electrons, guided by a magnetic field, with cavities within a block of copper to produce microwave radiation. The frequency range of the radiation depends on the size of the cavities. The devices are used in radar, and microwave ovens, where the radiation causes the molecules in food — particularly water molecules — to vibrate, leading to a rapid rise in temperature that is sufficient to cook the food.

Global magnetron key players include LG, GTOSHIBA, E2V, etc. Global top 3 manufacturers hold a share about 45%.

Asia Pacific is the largest market, with a share about 77%, followed by North America and Europe, both have a share about 20 percent.In terms of product, continuous magnetrons is the largest segment, with a share over 90%. And in terms of application, the largest application is home microwave Oven, followed by drying/heating.

The Global Info Research report includes an overview of the development of the Magnetron industry chain, the market status of Drying/Heating (Continuous Magnetrons, Pulse Magnetrons), Medical (Continuous Magnetrons, Pulse Magnetrons), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Magnetron.
