According to our (Global Info Research) latest study, the global Magnetron Sputter Guns market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The magnetron sputter gun uses a magnetic field to restrain the movement of electrons and improve the ionization rate of electrons. And compared with traditional sputtering, it has two characteristics of 'low temperature' and 'high speed'. is through a plasma-based deposition process in which energetic ions are accelerated towards the target. The ions hit the target and atoms are ejected (or sputtered) from the surface. These atoms move towards the substrate and incorporate into the growing film.
