Abstracts

According to our (Global Info Research) latest study, the global Mainline Electric Multiple Unit (MEMU) market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Most of the passenger bogeys are pulled or pushed by locomotive but in the EMU system, each bogey or passenger car is electrically powered using separate electric units embedded in the system. The locomotive used in the mainline electric multiple unit system also consists of a traction motor and electric signal units to control the driving coaches. In addition, MEMUs do not need any locomotive as each driving unit is powered with traction electrics. MEMUs are mainly used for sub-urban areas and metropolitan areas. Similar sizes of the coaches and dimensional stability of the train units used in the system are the factors boosting the demand for MEMU in the market. Moreover, increasing demand for electric powered train units owing to increasing urbanization in the developing economies and high adaptation of the MEMUs in short and medium distances are the factors considered to drive the market growth during the forecast period. According to Zuba Corporation, the MEMU market is expected to register a CAGR of approximately 6.2% during the forecast period.
