Abstracts

The global Maintenance Dredging market size is expected to reach $ 9014.2 million by 2029, rising at a market growth of 5.0% CAGR during the forecast period (2023-2029).

Maintenance Dredging is the activity of keeping existing watercourses, harbour basins, etc., at the required nautical and / or hydrological depth by removing siltation. The environmental effects of such an operation are in general of minor importance and limited to the effects of the extraction operation itself and the relocation operation when no beneficial use of the dredged material is available. Environmental issues increase in importance when the material to be dredged is polluted.

This report studies the global Maintenance Dredging demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Maintenance Dredging, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2022 as the base year.
