Maintenance-free sonic soot blower is a device that uses the principle of high-intensity sonic pulse soot cleaning to perform non-contact cleaning of soot on the surface of equipment such as boiler heating surfaces. Its core feature is that it does not require manual maintenance or replacement of parts during long-term operation. The device uses compressed air to drive the sonic generator to emit sonic waves of a specific frequency, vibrating and peeling off the dust attached to the surface of the heat exchange tube. It is widely used in boilers and heat exchangers in the power, metallurgy, petrochemical and other industries, effectively improving thermal efficiency and extending the service life of equipment.
