# Global Male Artificial Urinary Sphincter Supply, Demand and Key Producers, 2026-2032

https://marketpublishers.com/r/GC6902E3315EEN.html
Date: September 2026
Pages: 111
Price: US$ 4,480.00 (Single User License)
ID: GC6902E3315EEN

## Abstracts

The global Male Artificial Urinary Sphincter market size is expected to reach $ 70.95 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

A Male Artificial Urinary Sphincter is a surgically implanted urological device that uses an artificial closure mechanism to control urethral opening and closing and restore continence in male patients with intrinsic urinary sphincter deficiency. Commercial products are primarily hydraulic systems comprising a urethral occlusion cuff, a patient-operated scrotal pump and a pressure-regulating balloon or integrated fluid reservoir. Emerging products are introducing electromechanical actuators, sensors and external programming capabilities. The principal clinical application is moderate-to-severe male stress urinary incontinence following prostate surgery, radiotherapy or other prostate treatment, with selected use in neurogenic, traumatic and other complex sphincter deficiencies. Male Artificial Urinary Sphincters occupy the implantable medical-device segment of the urinary-incontinence treatment value chain. Upstream inputs include medical-grade silicone, precision pumps and valves, implantable electronic components, surface coatings, sterile packaging and contract manufacturing, while downstream participants include specialist urology centers, tertiary hospitals, implanting surgeons and healthcare reimbursement systems. Product value is determined by continence performance, implant durability, infection and erosion risk, surgical convenience, postoperative adjustability and long-term revision requirements.

## Key Findings

Global Male Artificial Urinary Sphincter shipments reached approximately

+357 96 030922
info@marketpublishers.com

13,000 systems in 2025

The weighted average manufacturer price was approximately US$4,000 per system in 2025

Fixed-pressure hydraulic systems remained the largest commercial product segment

Post-prostate treatment stress urinary incontinence was the principal clinical application

## Market Trends

Male Artificial Urinary Sphincters are evolving from conventional fixed-pressure hydraulic structures toward adjustable-pressure, pressure-responsive and actively controlled electromechanical systems. Mature products continue to rely primarily on a manually operated scrotal pump and a circumferential urethral cuff to restore continence. Newer systems increasingly emphasize simplified implantation, fewer intraoperative connections, broader cuff-size availability, hydrophilic or antimicrobial surface treatments and improved postoperative pressure optimization. Rigicon has developed pressure-responsive balloon products, Promedon provides postoperative hydraulic adjustment, while investigational systems from UroMems and Carvolix introduce active electronic control or external remote operation. The industry is moving from standardized mechanical continence restoration toward personalized pressure management and digitally enabled implants, although conventional hydraulic systems are expected to remain the commercial mainstream over the short to medium term.

## Market Dynamics

### Drivers

Market demand is primarily generated by persistent moderate-to-severe stress urinary incontinence following radical prostatectomy, radiotherapy and other prostate treatments. Clinical guidelines continue to recognize Male Artificial Urinary Sphincters as an important treatment option for suitable patients, particularly when conservative management or less invasive surgical procedures fail to deliver adequate continence improvement. Implanted systems also have finite mechanical service lives. Some

+357 96 030922
info@marketpublishers.com

patients require complete replacement or component revision because of mechanical failure, infection, urethral erosion or declining continence performance, creating recurring demand from the installed patient base.

## Restraints

Market expansion is constrained by a relatively limited eligible patient population, the concentration of implantation procedures in specialist centers and the requirement for patients to have sufficient manual dexterity and cognitive ability to operate conventional scrotal pumps. High total treatment costs, uneven reimbursement and a shortage of experienced reconstructive urologists limit penetration outside mature healthcare markets. Male urethral slings, adjustable periurethral balloons and conservative continence-management approaches also divert some patients with mild-to-moderate leakage. Long-term risks, including infection, urethral erosion, mechanical failure and repeat surgery, further influence patient acceptance and hospital purchasing decisions.

## Opportunities

Future market opportunities are concentrated among clinically eligible men who have not received effective surgical treatment and remain dependent on absorbent pads or conservative management, as well as in emerging regions where reconstructive urology capabilities are improving. Adjustable hydraulic systems can correct insufficient compression or excessive cuff pressure after implantation, while active electromechanical systems may reduce operational difficulty and limit continuous urethral compression. Surgeon training, implantation support, postoperative pressure adjustment, revision components and long-term patient follow-up will create additional value beyond initial device sales. Smart implants could establish a new premium technology segment if pivotal clinical trials and regulatory approvals are successfully completed, although they are unlikely to replace established hydraulic systems in the near term.

## Challenges

Manufacturers must maintain stable continence outcomes over long implantation periods while reducing infection, urethral erosion, tissue atrophy and mechanical revision risks. High-risk implantable-device regulation, demanding clinical evidence requirements and lengthy surgeon-adoption cycles make commercialization

+357 96 030922
info@marketpublishers.com

substantially more expensive than for conventional urological consumables. New entrants must demonstrate that adjustable or electronic systems provide clinically meaningful improvements rather than simply adding technical complexity. As electromechanical systems move closer to commercialization, battery life, hermetic sealing, software reliability, remote-control security and long-term tissue compatibility will become increasingly important competitive barriers.

## Industry Chain Analysis

The upstream industry chain includes medical-grade silicone elastomers, polyurethane tubing, metallic connectors, miniature pumps and valves, pressure reservoirs, surface coatings, sensors, implantable batteries, electronic controllers, precision molding, sterile packaging and sterilization services. Components must comply with implant-grade biocompatibility, mechanical-fatigue, fluid-sealing and quality-traceability requirements. Raw materials account for only a limited proportion of total product value, while research and development, regulatory registration, clinical validation, low-volume precision manufacturing and post-market surveillance represent more significant cost and value components.

Midstream manufacturers are responsible for implant architecture, pressure-control mechanisms, cuff-sizing systems, assembly, sterilization and clinical support. Downstream value creation covers hospital procurement, surgeon training, implantation procedures, device activation, postoperative adjustment and long-term revision management. Male Artificial Urinary Sphincter procedures remain concentrated in experienced reconstructive urology centers, making direct manufacturer support and specialized distributor networks important commercial capabilities. Companies that support the full patient implantation lifecycle generally have greater long-term value-capture potential than suppliers relying solely on initial device sales.

### Segment Insights

Fixed-pressure hydraulic systems continue to dominate the commercial market because of their long clinical history, mature surgical procedures and familiarity among implanting surgeons. Adjustable-pressure hydraulic systems represent a smaller segment but provide strategic value by allowing postoperative adjustment of urethral closure pressure and a more flexible balance between continence performance and tissue protection. Active electromechanical systems currently account for a minimal

+357 96 030922
info@marketpublishers.com

commercial share, as leading products remain in clinical development, but they represent the principal direction of long-term technology advancement.

By system architecture, three-component hydraulic devices continue to account for the majority of established demand, while integrated two-component systems seek to reduce surgical complexity by limiting the number of implanted components and intraoperative connections. By procedure type, primary implantation forms the underlying demand base, while complete system replacement and partial component revision generate recurring installed-base revenue. By clinical application, post-prostate treatment stress urinary incontinence accounts for the dominant share, while male neurogenic, traumatic and other complex sphincter deficiencies remain smaller specialist applications.

### Downstream Market Opportunities

The primary downstream opportunity remains men with persistent moderate-to-severe stress urinary incontinence following radical prostatectomy, radiotherapy or other prostate treatments, particularly those who do not achieve adequate continence improvement through pelvic-floor rehabilitation, medication, bulking agents or male urethral slings. Specialist hospitals can expand implantation volumes through standardized patient selection, dedicated continence clinics, stronger surgeon training and structured long-term follow-up. Smart or remotely controlled systems may provide treatment options for patients who have difficulty operating conventional scrotal pumps, although their long-term safety and reliability must be validated before broad clinical adoption.

## Regional Insights

North America and Western Europe represent the principal mature markets. These regions have established reconstructive urology centers, clearer recognition within clinical guidelines and relatively developed reimbursement pathways. Their large historical installed bases also generate replacement and revision demand. North America and Western Europe are the main launch regions for new hydraulic and electromechanical technologies because manufacturers can work with experienced clinical investigators and high-volume treatment centers. Nevertheless, demand remains concentrated in a limited number of specialist hospitals rather than being broadly distributed across general healthcare institutions.

+357 96 030922
info@marketpublishers.com

Asia-Pacific, Latin America and the Middle East offer long-term penetration opportunities. Market development depends on regulatory registration, reimbursement coverage, surgeon education and the establishment of referral pathways for post-prostate treatment incontinence. Domestic product commercialization in China remains at an early stage, while imported systems face constraints related to pricing, registration and specialist clinical support. Growth in these regions is therefore more likely to be driven gradually by major tertiary hospitals and regional specialist centers than by rapid mass-market adoption.

Competitive Landscape

The commercial market is concentrated among a limited number of manufacturers with complete implant systems and established clinical-validation capabilities. Boston Scientific maintains a mature-product advantage through the long clinical history and large installed base of the AMS 800. ZSI Surgical Implants differentiates through a preconnected and prefilled two-component design. Rigicon has developed both conventional hydraulic and pressure-responsive configurations, while Promedon emphasizes postoperative pressure adjustability. The next competitive layer consists of investigational smart implants. UroMems is advancing the automated UroActive system through pivotal clinical development, while Carvolix is developing the externally controlled Artus platform.

Competition is divided between established suppliers that rely on hydraulic-system reliability, surgeon familiarity and clinical-support networks, and emerging developers seeking differentiation through adjustability, automated control and reduced dependence on manually operated pumps. Future competitive positions will increasingly depend on long-term clinical outcomes, regulatory progress, revision rates, surgeon-training capabilities and the total cost of managing patients throughout the implant lifecycle.

## Report Scope

This report studies the global Male Artificial Urinary Sphincter production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Male Artificial Urinary Sphincter and provides market size (US$ million) and Year-over-Year

+357 96 030922
info@marketpublishers.com

(YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Male Artificial Urinary Sphincter that contribute to its increasing demand across many markets.

## Highlights and key features of the study

Global Male Artificial Urinary Sphincter total production and demand, 2021-2032, (K Units)

Global Male Artificial Urinary Sphincter total production value, 2021-2032, (USD Million)

Global Male Artificial Urinary Sphincter production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (K Units), (based on production site)

Global Male Artificial Urinary Sphincter consumption by region & country, CAGR, 2021-2032 & (K Units)

U.S. VS China: Male Artificial Urinary Sphincter domestic production, consumption, key domestic manufacturers and share

Global Male Artificial Urinary Sphincter production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (K Units)

Global Male Artificial Urinary Sphincter production by Type, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

Global Male Artificial Urinary Sphincter production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global Male Artificial Urinary Sphincter market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Boston Scientific Corporation, ZSI Surgical Implants S.R.L., Rigicon, Inc., Promedon S.A., GT Urological, UroMems S.A.S., Carvolix (formerly Affluent Medical), RELIEF srl, Myopowers, etc.

+357 96 030922
info@marketpublishers.com

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Male Artificial Urinary Sphincter market

## Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (K Units) and average price (K US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

# Contents

## 1 SUPPLY SUMMARY

1.1 Male Artificial Urinary Sphincter Introduction
1.2 World Male Artificial Urinary Sphincter Supply & Forecast
  1.2.1 World Male Artificial Urinary Sphincter Production Value (2021 & 2025 & 2032)
  1.2.2 World Male Artificial Urinary Sphincter Production (2021-2032)
  1.2.3 World Male Artificial Urinary Sphincter Pricing Trends (2021-2032)
1.3 World Male Artificial Urinary Sphincter Production by Region (Based on Production Site)
  1.3.1 World Male Artificial Urinary Sphincter Production Value by Region (2021-2032)
  1.3.2 World Male Artificial Urinary Sphincter Production by Region (2021-2032)
  1.3.3 World Male Artificial Urinary Sphincter Average Price by Region (2021-2032)
  1.3.4 North America Male Artificial Urinary Sphincter Production (2021-2032)
  1.3.5 Europe Male Artificial Urinary Sphincter Production (2021-2032)
  1.3.6 China Male Artificial Urinary Sphincter Production (2021-2032)
  1.3.7 Argentina Male Artificial Urinary Sphincter Production (2021-2032)
1.4 Market Drivers, Restraints and Trends
  1.4.1 Male Artificial Urinary Sphincter Market Drivers
  1.4.2 Factors Affecting Demand
  1.4.3 Male Artificial Urinary Sphincter Major Market Trends

## 2 DEMAND SUMMARY

2.1 World Male Artificial Urinary Sphincter Demand (2021-2032)
2.2 World Male Artificial Urinary Sphincter Consumption by Region
  2.2.1 World Male Artificial Urinary Sphincter Consumption by Region (2021-2026)
  2.2.2 World Male Artificial Urinary Sphincter Consumption Forecast by Region (2027-2032)
2.3 United States Male Artificial Urinary Sphincter Consumption (2021-2032)
2.4 China Male Artificial Urinary Sphincter Consumption (2021-2032)
2.5 Europe Male Artificial Urinary Sphincter Consumption (2021-2032)
2.6 Japan Male Artificial Urinary Sphincter Consumption (2021-2032)
2.7 South Korea Male Artificial Urinary Sphincter Consumption (2021-2032)
2.8 ASEAN Male Artificial Urinary Sphincter Consumption (2021-2032)
2.9 India Male Artificial Urinary Sphincter Consumption (2021-2032)

## 3 WORLD MANUFACTURERS COMPETITIVE ANALYSIS

4.5.2 China Based Manufacturers Male Artificial Urinary Sphincter Production Value (2021-2026)
4.5.3 China Based Manufacturers Male Artificial Urinary Sphincter Production (2021-2026)
4.6 Rest of World Based Male Artificial Urinary Sphincter Manufacturers and Market Share, 2021-2026
4.6.1 Rest of World Based Male Artificial Urinary Sphincter Manufacturers, Headquarters and Production Site (State, Country)
4.6.2 Rest of World Based Manufacturers Male Artificial Urinary Sphincter Production Value (2021-2026)
4.6.3 Rest of World Based Manufacturers Male Artificial Urinary Sphincter Production (2021-2026)

## 5 MARKET ANALYSIS BY TYPE

5.1 World Male Artificial Urinary Sphincter Market Size Overview by Type: 2021 VS 2025 VS 2032
5.2 Segment Introduction by Type
5.2.1 Non-Adjustable
5.2.2 Percutaneously Adjustable
5.2.3 Electronically Programmable
5.3 Market Segment by Type
5.3.1 World Male Artificial Urinary Sphincter Production by Type (2021-2032)
5.3.2 World Male Artificial Urinary Sphincter Production Value by Type (2021-2032)
5.3.3 World Male Artificial Urinary Sphincter Average Price by Type (2021-2032)

## 6 MARKET ANALYSIS BY ACTUATION MECHANISM

+357 96 030922
info@marketpublishers.com

6.1 World Male Artificial Urinary Sphincter Market Size Overview by Actuation Mechanism: 2021 VS 2025 VS 2032
6.2 Segment Introduction by Actuation Mechanism
6.2.1 Passive Hydraulic Compression
6.2.2 Active Electromechanical Occlusion
6.2.3 Others
6.3 Market Segment by Actuation Mechanism
6.3.1 World Male Artificial Urinary Sphincter Production by Actuation Mechanism (2021-2032)
6.3.2 World Male Artificial Urinary Sphincter Production Value by Actuation Mechanism (2021-2032)
6.3.3 World Male Artificial Urinary Sphincter Average Price by Actuation Mechanism (2021-2032)

## 7 MARKET ANALYSIS BY CLINICAL APPLICATION

7.1 World Male Artificial Urinary Sphincter Market Size Overview by Clinical Application: 2021 VS 2025 VS 2032
7.2 Segment Introduction by Clinical Application
7.2.1 Male Post-Prostate Treatment Stress Urinary Incontinence
7.2.2 Male Neurogenic, Traumatic and Other Sphincter Deficiency
7.2.3 Others
7.3 Market Segment by Clinical Application
7.3.1 World Male Artificial Urinary Sphincter Production by Clinical Application (2021-2032)
7.3.2 World Male Artificial Urinary Sphincter Production Value by Clinical Application (2021-2032)
7.3.3 World Male Artificial Urinary Sphincter Average Price by Clinical Application (2021-2032)

## 8 MARKET ANALYSIS BY APPLICATION

8.1 World Male Artificial Urinary Sphincter Market Size Overview by Application: 2021 VS 2025 VS 2032
8.2 Segment Introduction by Application
8.2.1 Public and University Hospitals
8.2.2 Private Hospitals
8.2.3 Specialty Urology Centers and Ambulatory Surgical Centers
8.2.4 Others

## I would like to order

Product name: Global Male Artificial Urinary Sphincter Supply, Demand and Key Producers, 2026-2032

Product link: https://marketpublishers.com/r/GC6902E3315EEN.html

Price: US$ 4,480.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
info@marketpublishers.com

## Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page https://marketpublishers.com/r/GC6902E3315EEN.html
