According to our (Global Info Research) latest study, the global Lubrication System market size was valued at USD 350.8 million in 2023 and is forecast to a readjusted size of USD 405.9 million by 2030 with a CAGR of 2.1% during review period.

Lubricants are essential for proper functioning of any machinery used in an application. Lubricants are used to reduce friction between two moving surfaces. A lubrication system does not eradicate friction from the machinery. Friction is required for transfer of power from one part to another. A lubrication system is employed to lower the wear and tear in the operating machinery.

Advancements in technology have led to development of several controlling and monitoring systems, which assist in proper lubrication of various machineries or units. These systems are further enhancing the reliability and performance of lubrication systems by providing lubrication at proper intervals and in correct quantities. Several methods and processes are employed to lubricate a machine. Lubrication can be carried out by using manual lubrication systems or centralized/automatic lubrication systems.
