Abstracts

The global Maleic Anhydride Graft Polymer market size is expected to reach \$ 1649.3 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Maleic anhydride graft polymer is a polymer obtained by grafting maleic anhydride as monomer with other materials under suitable temperature conditions. Usually, the main grafting methods are solution method, melt method, radiation method and solid phase method. Among them, the melt method is the most common and important method. Due to the combination of polar group aldehyde and olefin non-polar chain segment provided by maleic anhydride, maleic anhydride graft can be widely used in the modification of materials such as PA, PP and PE, wire and cable masterbatch, wood and plastic industries, and hot melt adhesives, mainly to play a role in coupling compatibility.

The key manufacturers of maleic anhydride graft polymers worldwide are Clariant, Polyscope Polymers, SK Functional Polymer, The Compound, Ningbo Materchem, Dow, LyondellBasell, Eastma, Westlake Chemical and others. The top five producers account for 40% of the market share in total, with the largest producer being Clariant, accounting for 10% of the market share. Global origins are mainly located in North America, Europe, China, Japan, Korea, India, Southeast Asia, South America, etc., with China holding the largest market share with 35%. In terms of product categories, maleic anhydride grafted polypropylene holds the highest market share, accounting for about 40%, followed by maleic anhydride grafted polyethylene and maleic anhydride grafted polystyrene. In terms of applications, maleic anhydride grafted compatibilizers are the top application area with 45% of the market share, followed by tougheners and adhesives with 30% and 15% respectively.
