Abstracts

Maleic anhydride is a colorless or white solid with an acrid odor. Maleic anhydride is a very versatile molecule that lends itself to many applications requiring a number of properties and functionalities. With three active sites (two carboxyl groups and one double bond), it is an excellent joining and cross linking agent. Its major end use, representing well over half of global demand, is in the manufacture of unsaturated polyester resins, where its cross-linking abilities are important.

Scope of the Report:

This report focuses on the Maleic Anhydride in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

China is the largest manufacturer of maleic anhydride who accounts for about 57.88% capacity market share in 2014. USA, following China, becomes the second largest one, with 14.51% capacity market share in 2014.

Although China has the largest capacity of maleic anhydride in the world, its capacity utilization rate is much lower, especially for maleic anhydride capacity using benzene oxidation. The oversupply in China is obvious. Affected by the downstream industry and poor profits, benzene oxidation maleic anhydride manufacturers prefer to hold wait-and-see attitudes toward the market for the time being.

The worldwide market for Maleic Anhydride is expected to grow at a CAGR of roughly 8.9% over the next five years, will reach 3730 million US\$ in 2023, from 2240 million US\$ in 2017, according to a new GIR (Global Info Research) study.
