Abstracts

According to our (Global Info Research) latest study, the global Maleic Anhydride Modified Polypropylene Wax market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Maleic anhydride modified polypropylene wax is a maleic anhydride grafted polypropylene product. Polypropylene is used as the main substrate, which endows polyolefin products with polarity and adhesiveness. The product is transparent or translucent colorless or light yellow granular product. It is prepared by grafting maleic anhydride to polypropylene. Because it introduces a highly polar side group (maleic anhydride) into the main chain of polypropylene, maleic anhydride grafted polypropylene can become a polar material A bridge of adhesion and compatibility with non-polar materials. In the application of PP+glass fiber modification, it can react with the surface-treated glass fiber to improve the compatibility of PP and glass fiber, thereby improving the tensile strength and impact strength of polypropylene. Adding PP compatibilizer when producing filled polypropylene can greatly improve the affinity between filler and polypropylene and the dispersibility of filler. This product can be used as a surface improver for extruded sheet or extruded sheet, which can effectively improve the surface flatness of sheet or sheet, and eliminate the unevenness and pitting on the surface of the material.
