Mammography software is a type of medical imaging software that is used to analyze images of the breast acquired through mammography. Mammography is a common diagnostic tool for detecting and diagnosing breast cancer, and mammography software can help radiologists and other medical professionals to identify abnormalities and potential cancerous lesions in breast tissue. Mammography software typically includes features such as image processing algorithms, image enhancement tools, and computer-aided detection (CAD) systems. These tools can help to improve the accuracy and efficiency of breast cancer screening and diagnosis, enabling earlier detection and potentially better outcomes for patients.
