Abstracts

According to our (Global Info Research) latest study, the global Managed Hybrid Cloud Hosting market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

We defines managed hybrid cloud hosting (MHCH) as a standardized, productized offering that combines a cloud-enabled system infrastructure platform — consisting of a pool of compute, network and storage hardware — with cloud infrastructure framework software to facilitate self-service and rapid provisioning. In addition to offering this service from cloud infrastructure located in its own data center, the provider must offer a choice of using a hyperscale public infrastructure as a service (IaaS) provider or an Asian country-specific, large-scale IaaS provider. The infrastructure platform should be located both in a service provider's data center for the cloud-enabled system infrastructure (CESI) platform and in an Asia country for the public IaaS platform. It also requires the use of a standardized deployment across all service provider customers and leverages a single codebase.
