Abstracts

Managed Pressure Drilling (MPD) is defined by the International Association of Drilling Contractors (IADC) as 'an adaptive drilling process used to more precisely control the annular pressure profile throughout the wellbore.' The objectives of MPD are 'to ascertain the downhole pressure environment limits and to manage the annular hydraulic pressure profile accordingly.'

SCOPE OF THE REPORT:

This report studies the Managed Pressure drilling market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Managed Pressure drilling market by product type and applications/end industries.

Drilling with MPD gives operators the ability to rapidly adjust bottom hole pressure to reducing non-productive time (NPT) risks associated with mitigating kicks, losses and wellbore stability issues. With MPD operators can decrease bottom hole pressure related NPT, reducing drilling days and improving overall economic viability of well construction.

The global Managed Pressure drilling market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which

cannot be ignored. Any changes from United States might affect the development trend of Managed Pressure drilling.
