Managed and unmanaged switches are types of network switches used to connect devices within a network. Managed switches offer advanced features like VLANs, Quality of Service (QoS), and SNMP monitoring, allowing for greater control and customization of network settings. They are ideal for larger, complex networks that require high performance and security. Unmanaged switches, on the other hand, provide basic connectivity without configuration options. They are plug-and-play devices, making them suitable for small, simple networks where ease of use and cost are primary considerations.
