The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Manganese-boron steel is an advanced high-strength steel (AHSS) commonly used in automobile industry. It is a low carbon steel alloy with a small amount of manganese and boron. The addition of manganese improves the strength and toughness of steel, while boron as a hardener increases the hardness and strength of steel. Manganese-boron steel is famous for its excellent formability, weldability and machinability. It can also resist deformation and cracking during the stamping process, which makes it an ideal material for automotive components requiring complex shape and high strength (such as safety components, chassis components and suspension systems).
