The global Manganese Sulfate market size is expected to reach \$ 1257 million by 2032, rising at a market growth of 12.7% CAGR during the forecast period (2026-2032).

Manganese Sulphate ($MnSO_4$) is an inorganic chemical compound that exists primarily as a pale pink solid or crystalline powder. It is a critical manganese salt widely used across multiple industries, notably in agriculture and battery manufacturing. Manganese Sulphate is typically classified into two main product types based on its purity level: technical-grade and battery-grade. Technical-grade Manganese Sulphate, with a typical purity of 98%-99%, is predominantly used in fertilizer production and as a feed additive in animal nutrition. In contrast, battery-grade Manganese Sulphate—also known as High-Purity Manganese Sulfate Monohydrate (HPMSM)—features purity exceeding 99.9% with stringent impurity control (especially iron, potassium, and sodium), and is essential for the synthesis of high-performance cathode materials such as NCM (Nickel-Cobalt-Manganese), LMO (Lithium Manganese Oxide), and LMFP (Lithium Manganese Iron Phosphate) used in lithium-ion batteries.

The top players of Manganese Sulphate are mainly located in China, including Guizhou Dalong Huicheng New Material, ISKY Chemicals, Lantian Chemical, Guizhou Jinrui New Materials, and Guizhou Manganese Mineral Group, etc. In 2024, the global top three holds a share over 55 percent. In terms of battery grade Manganese Sulphate, China is the largest producer and dominating the global market, top two players occupied for a share over 65%.

Currently the Manganese Sulphate is mainly used in agricultural fields especially in feed and fertilizer fields. The battery grade Manganese Sulphate is used in cathode materials of lithium batteries, driven by the fast-growing electric vehicle in the world, especially in

China and Europe. In future, the Manganese Sulphate market will be more competitive, especially in the battery grade Manganese Sulphate market.
