According to our (Global Info Research) latest study, the global Manifold Solenoid Valves market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Solenoid valve is a control units when an electrically energy is passed through valves, it either shut off or it allows the fluid flow. The actuator acts as an electromagnet. When energized, a magnetic field builds up which pulls a plunger or pivoted armature against the action of a spring and when de-energized the plunger or pivoted armature will return to its original position by the spring action. A solenoid valve manifold is similar to a solenoid valve in that it controls the flow of liquids or gasses.
