Man-made fibres are to be distinguished from natural fibres such as silk, cotton, and wool. Polymers are also natural fibres, which consists of polymers, but they emerge from the textile manufacturing process in a relatively unaltered state. Some man-made fibres, too, are derived from naturally occurring polymers such as rayon and acetate.

Scope of the Report:

The demand for synthetic fibers is mainly driven by increasing applications of synthetic fibers in the apparel and the construction industry. Synthetic fibers give specific characteristics such as thermal insulation, low soiling characteristics, which can be modified for a wide range of products such as table cloths, napkins, curtains and carpets. They are also being used in new areas of application such as roof insulation, geotextiles for stability of roads, walls and dams. Examples of synthetic fibers include nylon, rayon, polyester, polyethylene, polypropylene and acetate.

The global Manmade and Special Fiber Fabrics market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
