## Abstracts

Mannan oligosaccharide is formed by D-mannose connected by  $\alpha$ -1,4 glycosidic bond to form the main chain, and other monosaccharides (such as glucose or galactose) are connected to the main chain or branched chain to form a degree of polymerization of 2 to 10. Between the oligosaccharides, it is also called mannan oligosaccharides. Mannan oligosaccharides are widely found in konjac flour, guar gum, sapphire gum and cell walls of various microorganisms. As the only new functional oligosaccharides that can bind exogenous pathogens in the intestine, its special properties are its industrial development. Provides a very broad market prospect.
