## Abstracts

According to our (Global Info Research) latest study, the global Manoeuvring Thrusters market size was valued at USD 1375.2 million in 2023 and is forecast to a readjusted size of USD 1727.4 million by 2030 with a CAGR of 3.3% during review period.

Manoeuvring thruster (bow thruster or stern thruster) is a transversal propulsion device built into, or mounted to, either the bow or stern, of a ship or boat to make it more manoeuvrable.

Bow thrusters make docking easier, since they allow the captain to turn the vessel to port or starboard side, without using the main propulsion mechanism which requires some forward motion for turning; The effectiveness of a thruster is curtailed by any forward motion due to the Coanda effect. A stern thruster is of the same principle, fitted at the stern. Large ships might have multiple bow thrusters and stern thrusters.

The Global Info Research report includes an overview of the development of the Manoeuvring Thrusters industry chain, the market status of Small Boats (Tunnel Thrusters, Waterjet Bow Thrusters), Medium Size Ships (Tunnel Thrusters, Waterjet Bow Thrusters), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Manoeuvring Thrusters.
