## Abstracts

According to our (Global Info Research) latest study, the global Manual Attenuators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Manual attenuators generally consist of a variable resistor or a set of fixed resistors that can be switched in or out to achieve different levels of attenuation. By adjusting the resistance, the signal passing through the attenuator encounters a greater resistance, resulting in a reduction in amplitude.

Manual attenuators, also known as adjustable attenuators, are electronic devices used to reduce the power or amplitude of a signal. They are typically used in various applications, such as telecommunications, audio systems, radio frequency (RF) testing, and signal processing.
