According to our (Global Info Research) latest study, the global Malleable Iron Castings market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Malleable iron is cast as white iron, the structure being metastable carbide in a pearlitic matrix. Through an annealing heat treatment, the brittle structure as first cast is transformed into the malleable form. Carbon agglomerates into small roughly spherical aggregates of graphite leaving a matrix of ferrite or pearlite according to the exact heat treatment used. Malleable iron is mainly used in the device that need the small casting with require good strength and elastic, such as power devices, portable tools, plumbing fixtures, etc.
