The global Manual Jet Ventilators market size is expected to reach \$ 417 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032). In 2025, the global Manual Jet Ventilator market records an annual production volume of approximately 920,000 units against an installed global production capacity of about 990,000 units per year, with average unit price USD 320, while the industry maintains a relatively strong average gross margin of around 39%. Manual Jet Ventilators are compact, non-electric respiratory devices that deliver controlled high-pressure oxygen pulses for emergency or short-term ventilation during airway management and anesthesia. Their supply chain starts with medical-grade metals, polymers, valves, and pressure regulators, moves through precision manufacturing, assembly, calibration, and regulatory compliance by certified medical device producers, and ends with distribution via EMS, hospital, anesthesia, and emergency-care equipment suppliers to end users such as hospitals, ambulatory centers, and rescue services.
