A manual metallographic sample cutting machine is a specialized device used in metallurgy and materials science for obtaining samples from metal objects or workpieces for metallographic analysis. It operates without automated controls and relies on the operator's manual manipulation. It features a cutting blade, often an abrasive wheel or diamond blade, that rotates at a set speed. The operator manually guides the workpiece against the blade, carefully controlling the cutting process by adjusting the feed rate and depth of cut to achieve samples of the desired size and shape, which are then further processed for microscopic examination to understand the metal's microstructure and properties.
