A Manual Valve Manifold Box (VMB) is a practical apparatus typically employed in gas distribution systems. It features a sturdy enclosure within which are installed multiple manually operated valves and gas piping connections. This type of VMB relies on human intervention to control the opening, closing, and flow direction of gases by directly turning the valve handles. It's mainly used for routing and distributing gases from different sources to designated destinations in various industrial applications such as small-scale manufacturing, laboratories, or research facilities where precise yet simple manual gas flow management suffices.
