The global Manufacturing Execution System Solutions market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Manufacturing execution system (MES) software is used by manufacturers to monitor the production process. Manufacturing companies benefit from MES by tracking real-time production data, which they can use to optimize the production output. Manufacturing execution systems is used mostly by production managers, shop floor supervisors, and the employees involved in the production process. Managers and supervisors utilize MES software to implement production plans and monitor efficiency, as well as to detect potential issues and implement corrective actions. Shop floor employees use this type of software to follow their work schedules, allocate resources to the right workstation for each production stage, and alert supervisors and managers when something goes wrong. MES software requires data from supervisory control and data acquisition systems (SCADA), which are utilized to manage and control the equipment used in production. It is also critical for manufacturers to integrate this type of software with their ERP solutions to transfer information on production performance, materials consumption, and so on. For large and complex manufacturing processes, it is important to integrate MES with solutions such as product lifecycle management (PLM), supply chain management, and enterprise asset management (EAM).
