## Abstracts

According to our (Global Info Research) latest study, the global Mapping Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

It usually refers to a set of programs used by computers for drawing. Software programs can be divided into three categories according to functions, and the design of the programs has certain criteria. The collection of multiple programs is complete, capable of drawing basic map graphics and various types. A program group of commonly used maps, called a drawing software system, or a drawing software package. Drawing software is usually written in a high-level algorithmic language, represented as a subroutine, and each subroutine has some independent drawing function. A drawing package is a collection of drawing subroutines that can include dozens to hundreds of subroutines. The user calls some of the subroutines to draw a certain graphic or a map as needed.
