A Marine Air Horn System is a type of signaling device used on ships and boats to produce loud warning signals that can be heard over long distances. It typically consists of an air compressor, a set of air horns, and a control panel. The air compressor generates compressed air that is used to produce sound through the air horns. The control panel allows the user to select different sound patterns and adjust the volume of the air horn system. The Marine Air Horn System is an important safety feature on ships, allowing them to signal their presence to other vessels and warn of potential dangers.
