## Abstracts

According to our (Global Info Research) latest study, the global Marine Air Intake Systems market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A marine air intake system is a crucial component of a ship's ventilation system. It is responsible for providing clean and fresh air to the ship's engine room, which is necessary for the proper functioning of the ship's machinery. The system typically consists of a number of components, including the air intake duct, air filters, and ventilation fans. The air intake duct is the pathway through which air is drawn into the ship's engine room. It is usually located on the deck of the ship and is designed to prevent the ingress of water, especially during rough weather conditions.
