Marine cable clamp (also known as submarine cable clamp or underwater cable fixture) is a specialized device used for securing and protecting submarine cables during laying and maintenance operations. Its primary function is to fix and safeguard the cables in the underwater environment, preventing movement or damage due to water currents, changes in seabed topography, or other external forces. Marine cable clamps are typically made from corrosion-resistant, high-pressure, and low-temperature resistant materials, and their design takes into account the complex conditions of the seabed. They can be installed by divers or remotely operated vehicles (ROVs), and are mainly used for submarine communication cables, power cables, and the interconnecting cables between oil and gas platforms.
