The global Marine Circuit Breaker market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Marine circuit breakers are electro-mechanical devices specifically designed to protect electrical circuits from overload of current or short circuit. It interrupts the current flow the moment a fault in the flow is detected. It is automatically tripped by the surge of current. Once they have been tripped, they need to be manually reset. The primary benefit of breakers are that they don't need to be replaced after being tripped.
