According to our (Global Info Research) latest study, the global Marine Cylinder Oil market size was valued at USD 2835.8 million in 2023 and is forecast to a readjusted size of USD 3324.4 million by 2030 with a CAGR of 2.3% during review period.

Marine lubricants refer to lubricating oil and lubricating grease that used in marine industry. The use of lubricants and lubricant parameters on ships is an important role managed by the main engine lube oil system. This consists of a pump that pressurizes the oil, circulating it through a set of filters and a cooler before distribution to all the moving components of the diesel engine. Cylinder Oils are blended from highly refined base oils and multifunctional additive packages. They can be used in crosshead engines running on high sulfur content diesel or residual fuels. To counter the risk of corrosion from sulphuric acid condensates, marine cylinder oils are formulated with a higher alkalinity (BN) than found in other lubricants: typical automotive engine oils may be in the 8-15 BN range, for example, while current marine cylinder lubricants are typically of 40-80 BN.

Global Marine Cylinder Oil key players include BP, ExxonMobil, Shell, Total, Chevron, etc. Global top five manufacturers hold a share about 75%. Asia Pacific is the largest market, with a share about 50%, followed by Europe, with a share about 20 percent. In terms of product, High-BN (70-100 BN) is the largest segment, with a share about 85%.
