Abstracts

The global Marine Electronics market size is expected to reach \$ 21070 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Marine electronics refers to electronics devices designed and classed for use in the marine environment on board ships and yachts where even small drops of salt water will destroy electronics devices. Therefore, the majority of these types of devices are either water resistant or waterproof.

In this report, marine electronics include GPS & radar systems, fish finders & sonar, marine autopilots, communication equipment, audio & video equipment and others (boat surveillance & security, autonomous identification systems)

More than 80% of global trade by volume is carried by sea, and this share continues to rise with globalization and e-commerce.

Ships require modern navigation, communication, and monitoring electronics to ensure safe and efficient voyages.

Increased vessel traffic creates demand for advanced collision avoidance systems, real-time tracking, and integrated bridge systems.

International bodies like the International Maritime Organization (IMO) enforce strict rules under SOLAS (Safety of Life at Sea) and other conventions.

Ships must be equipped with Automatic Identification Systems (AIS), Electronic Chart Display and Information Systems (ECDIS), radar, and distress communication

equipment.

Growing focus on passenger safety in cruise liners and crew safety in commercial shipping is accelerating adoption of certified marine electronics.

IMO's emissions reduction targets (IMO 2020, IMO 2030, and IMO 2050) are pushing vessels toward fuel-efficient navigation and real-time emissions monitoring.

Marine electronics play a role in fuel consumption tracking, route optimization, and integration with energy management systems.

Increased monitoring of ballast water, emissions, and waste management is also boosting demand for specialized sensors and electronic controls.

The shift toward smart ships and autonomous vessels is transforming marine electronics.

Integration of IoT, AI, and cloud-based platforms allows for real-time vessel monitoring, predictive maintenance, and data-driven decision-making.

Marine electronics are increasingly part of integrated bridge systems (IBS) that unify navigation, communication, and automation under one digital interface.

This report studies the global Marine Electronics demand, key companies, and key regions.
