According to our (Global Info Research) latest study, the global Marine Exhaust Gas Solutions market size was valued at US\$ 1233 million in 2024 and is forecast to a readjusted size of USD 1660 million by 2031 with a CAGR of 4.4% during review period.

Marine exhaust gas solutions refer to a range of technologies and strategies implemented in the maritime industry to mitigate the environmental impact of exhaust gas emissions generated by ships and vessels. These solutions are designed to reduce harmful pollutants and greenhouse gases released into the air as a result of marine propulsion and power generation activities. The primary pollutants of concern include sulfur oxides (SO<sub>x</sub>), nitrogen oxides (NO<sub>x</sub>), particulate matter (PM), and carbon dioxide (CO<sub>2</sub>).

Stringent international regulations, such as the International Maritime Organization's (IMO) sulfur and nitrogen oxide emission limits, have driven the adoption of marine exhaust gas solutions. Shipowners and operators have been investing in technologies to comply with these regulations and reduce the environmental impact of their vessels.
