According to our (Global Info Research) latest study, the global Marine Handheld GPS market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Marine handheld GPS refers to a portable electronic device specifically designed for navigation and positioning purposes in marine environments. This device utilizes signals from a network of satellites orbiting the Earth to determine its precise geographic location, as well as other important information such as speed, heading, altitude, and time.

Marine handheld GPS units are rugged and water-resistant to withstand the conditions of the maritime environment. They often come with features tailored for boaters, sailors, and marine enthusiasts, including nautical charts, waypoints, routes, tide information, and points of interest related to navigation. Users can use these devices to accurately determine their position on the water, plan routes, and ensure safe navigation even in challenging conditions or remote areas.

These GPS units are particularly valuable for small boats, kayaks, and other watercraft where a dedicated onboard navigation system might not be available or necessary.
