According to our (Global Info Research) latest study, the global Marine Integrated Bridge Systems (IBS) market size was valued at US\$ 10170 million in 2025 and is forecast to a readjusted size of US\$ 14050 million by 2032 with a CAGR of 4.8% during review period.

The development trend of Integrated Bridge Systems (IBS) for ships is focused on enhancing safety, efficiency, and automation in maritime operations. IBS is becoming more automated and digitally connected, allowing for seamless integration of various navigation and communication systems. This trend includes the use of advanced sensors, artificial intelligence, and machine learning algorithms to automate navigation, collision avoidance, and route planning. IBS is being developed to provide a comprehensive and real-time view of the ship's surroundings, including weather conditions, traffic, and potential hazards. This is achieved through the integration of radar, sonar, GPS, and other sensors, as well as the use of augmented reality and virtual reality technologies. IBS is being designed to integrate with shore-based systems, such as port authorities, traffic management centers, and weather forecasting services. This allows for better coordination and communication between ships and shore-based entities, leading to improved efficiency and safety in maritime operations.
