The global Marine Internal Combustion Engine market size is expected to reach \$ 9754 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

Marine internal combustion engine is a kind of device applied in marine propulsion system. It supplies power to the marine ships. The marine internal combustion engine is quite vast compared with the engines used in automobiles. It is made up of several components such as the block, crankshaft, bedplate, pistons, cylinder head and valves. Generally, marine internal combustion engine take heavy oil and diesel as fuel. To meet the need of power of marine ship, the marine internal combustion engines generally have a large horsepower. In this report, the statistical data we provide doesn't include the engines used in small boats and recreational ships.

Global Marine Internal Combustion Engine key players include Mitsui, Caterpillar, CSIC, CSSC, Yanmar, etc. Global top five manufacturers hold a share about 55%.

Japan is the largest market, with a share over 30%, followed by China and South Korea, both have a share over 50%.

In terms of product, Low-speed Engine is the largest segment, with a share about 65%. And in terms of application, the largest application is Container Ship, followed by Bulk Freighter, Tanker, etc.
