Abstracts

According to our (Global Info Research) latest study, the global Marine Magnetic Tachometer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The working principle of the marine magnetic tachometer is mainly based on the balance of magnetic force and mechanical force. When the shaft of the measured engine rotates, it will drive the magnetic element to generate a rotating magnetic field. This rotating magnetic field induces eddy currents on the metal cap, which in turn produces a torque change proportional to the speed. This torque change will drive the pointer to deflect, thereby indicating the current speed value.
