## Abstracts

The global Marine Modular Sanitary Unit market size is expected to reach \$ 129 million by 2032, rising at a market growth of 7.5% CAGR during the forecast period (2026-2032).

In 2025, global production of marine modular sanitary units reached 14,360 units, with an average selling price of US\$5,210 per unit. A marine modular sanitary unit is an independent toilet unit prefabricated in a factory and then hoisted or modularly installed at the shipyard. It typically consists of wall panels, ceiling panels, fireproofing, plumbing, electrical wiring, and bathroom accessories. It provides washing, showering, and toileting functions within a limited space and is mainly used in accommodation spaces of cruise ships, ferries, passenger ships, cargo ships, offshore platforms, and naval vessels. The upstream sector primarily includes metal sheets and profiles, GRP/fiberglass components, wall and ceiling panels, bathroom fixtures, water supply and drainage pipe fittings, grey water/black water system connectors, electrical wiring harnesses, lighting and ventilation components, and fireproof materials. The midstream sector involves module design, sheet metal/composite material processing, pre-assembly, prefabrication of piping and electrical systems, and final assembly. The downstream sector serves shipyards, cruise lines, ferry operators, offshore platform EPC contractors, naval project general contractors, and ship conversion/refurbishment projects. Gross profit margins range from approximately 15% to 30%.
