According to our (Global Info Research) latest study, the global Marine Navigation Systems market size was valued at USD 1396.6 million in 2023 and is forecast to a readjusted size of USD 1816.7 million by 2030 with a CAGR of 3.8% during review period.

Marine Navigation Systems consist of Chart Plotter and Electronic Navigation Chart. A Chart plotter is a device used in marine navigation that integrates GPS data with an electronic navigational chart (ENC). The chart plotter displays the ENC along with the position, heading and speed of the ship, and may display additional information from radar, automatic information systems (AIS) or other sensors.

An electronic navigational chart or ENC is an official database created by a national hydrographic office for use with an Electronic Chart Display and Information System (ECDIS). An electronic chart must conform to standards stated in the International Hydrographic Organization (IHO) Publication S-57 before it can be certified as an ENC. Only ENCs can be used within ECDIS to meet the International Maritime Organisation (IMO) performance standard for ECDIS.

The Global Info Research report includes an overview of the development of the Marine Navigation Systems industry chain, the market status of Defense (Chart Plotter, Electronic Navigation Chart), Commercial (Chart Plotter, Electronic Navigation Chart), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Marine Navigation Systems.
