According to our (Global Info Research) latest study, the global Marine Oligosaccharides market size was valued at US\$ 3515 million in 2024 and is forecast to a readjusted size of USD 4927 million by 2031 with a CAGR of 5.2% during review period.

Marine polysaccharides originated from seaweeds, including agar, alginate, carrageenan, and fucoidan, possess various kinds of physiological activities and have been widely used in food, agricultural and medical areas. However, the application has been greatly limited by their poor solubility and low bioavailability. Thus marine oligosaccharides, as the degradation products of those polysaccharides, have drawn increasing attentions due to their obvious biological activities, good solubility and excellent bioavailability.
