Marine open array Doppler radar is an advanced radar system for ship navigation and target detection, which adopts open array antenna design and Doppler effect principle. The open array antenna consists of a series of rotating antenna units, providing higher resolution and wide coverage, suitable for detection missions over long distances and in complex sea conditions. Through the Doppler effect, it can detect the relative speed of the target and distinguish between stationary objects and moving targets, such as ships, weather systems or obstacles, thereby improving navigation safety and maritime operation efficiency. This radar system is commonly used on merchant ships, fishing vessels and large yachts, supports all-weather operation, and provides enhanced automatic target tracking and weather detection functions, providing ship operators with critical situational awareness capabilities.
