## Abstracts

The global Marine Permanent Magnet Direct Drive Shaft Generator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Marine Permanent Magnet Direct Drive Shaft Generator is a technological system used in maritime applications for power generation on ships and boats. This generator makes use of the permanent magnet technology in its design. Unlike traditional generators that use an electromagnetic field, this system utilizes permanent magnets to produce electricity. The primary purpose of this generator is to convert mechanical energy from the ship's propulsion system into electrical energy efficiently. It is directly connected to the ship's propulsion shaft, eliminating the need for additional mechanical components like gears or belts. This direct drive arrangement increases the overall efficiency of power generation.
