According to our (Global Info Research) latest study, the global Marine Phospholipid Krill Oil market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Marine phospholipid is a lipid substance extracted from deep-sea krill and other marine organisms. Its main components include phosphatidylcholine, phosphatidyl inositol, phosphatidylethanolamine, etc. Phospholipids are one of the major components of cell membranes and play important roles in brain, cardiovascular and skin health. Marine phospholipids are commonly used in dietary supplements and skin care products and are thought to benefit brain function, cardiovascular health and skin care. Krill oil is a fat rich in omega-3 fatty acids, phospholipids and antioxidants, mainly derived from deep-sea krill, such as Antarctic Krill. The omega-3 fatty acids include EPA (eicosapentaenoic acid) and DHA (docosahexaenoic acid), which have properties beneficial to cardiovascular, brain and joint health. Krill oil is widely used in dietary supplements to provide natural omega-3 fatty acids and other nutrients. As market competition intensifies, manufacturers may introduce more types and uses of marine phospholipids and krill oil products to meet the needs of different consumer groups. Marine phospholipids and krill oil have good market potential as natural, comprehensive nutritional sources in the health and wellness field in the future.
