Abstracts

According to our (Global Info Research) latest study, the global Marine Quick Closure Valve (MQCV) market size was valued at US\$ 827 million in 2025 and is forecast to a readjusted size of US\$ 1231 million by 2032 with a CAGR of 5.9% during review period.

A Marine Quick Closure Valve (MQCV) is a safety control valve used in ship piping systems. It is designed to rapidly shut off the flow of fuel, cooling water, ballast water, or other media in emergency situations (such as fire, leak, or collision) to prevent the spread of the accident and ensure the safety of the vessel and personnel. This valve is typically installed in critical locations such as engine rooms, fuel tanks, and hydraulic compartments, and is instantly closed via remote control systems (e.g., pull-wire, pneumatic, or electromagnetic). MQCVs offer high reliability, corrosion resistance, vibration resistance, and high-temperature resistance, and comply with international maritime safety regulations such as IMO, ABS, and DNV.

The upstream sector primarily encompasses suppliers of valve body materials (such as copper-nickel alloys, stainless steel, and aluminum bronze) as well as castings, forgings, seals, springs, pneumatic cylinders, solenoid valves, marine PLCs, and remote control cables; the downstream sector covers shipyards, owners of oil tankers and LNG carriers, offshore equipment enterprises, ship repair and retrofitters, and marine equipment distributors and service providers.

The global market for marine quick closure valves (MQCVs) features a unit price of \$1,500, an annual sales volume of approximately 536,000 units, and an industry profit margin of 35%.

The global MQCV market is poised for steady growth, driven by stricter maritime safety regulations, the retrofitting of aging vessels, and rising demand for new shipbuilding. Future products will place greater emphasis on rapid shut-off reliability, corrosion resistance, sealing performance, and adaptability to extreme operating conditions, while evolving toward lightweight, modular, and long-service-life designs. As ship automation advances, the application of pneumatic, electric, and remote-controlled quick-closing valves will expand, with increasing integration into ship monitoring, alarm, and safety management systems. LNG carriers, oil/chemical tankers, offshore platforms, and new-energy vessels will emerge as key growth areas. Manufacturers will also intensify efforts in material innovation, intelligent diagnostics, predictive maintenance, and securing international classification society certifications; market competition will shift from a price-driven model to a comprehensive contest based on safety performance, regulatory compliance, and full-lifecycle service capabilities.
