The global Marine Rolling Stabilizer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Marine rolling stabilizers are fins or rotors mounted beneath the waterline and emerging laterally from the hull to reduce a ship's roll due to wind or waves. Marine rolling stabilizers have been around for a long time, but are typically known for being used on larger passenger ships and superyachts. However, with the dramatically increased comfort and usability stabilizers add to any boat, it has also left owners of small leisure vessels wanting these systems.
