Abstracts

According to our (Global Info Research) latest study, the global Marine Rubber and Plastic Insulation Material market size was valued at US\$ 531 million in 2025 and is forecast to a readjusted size of US\$ 776 million by 2032 with a CAGR of 5.6% during review period.

In 2025, global production of marine rubber and plastic insulation materials reached 36.84 million square meters, with an average selling price of US\$14 per square meter. Marine rubber and plastic insulation materials refer to closed-cell flexible rubber and plastic insulation systems used in ships, offshore platforms, and their HVAC, refrigeration, air ducts, pipelines, equipment, and tank systems. Their main functions are thermal insulation, condensation prevention, corrosion prevention, noise reduction, and improved fire resistance/low smoke performance. Applications cover marine air conditioning ducts, refrigeration and cold storage systems, refrigerant and chilled water pipelines, chillers, fans, coils, air handling units, tanks, and some engine room auxiliary equipment. The upstream mainly includes synthetic rubber (such as NBR, EPDM), PVC or polyolefin resin, aluminum foil or black aluminum film coating, adhesives, flame retardant/smoke suppression systems, and outer protective materials; the midstream involves formulation development, extrusion/foaming, lamination, cutting and molding, prefabrication, and classification society or MED/FTP Code certification; the downstream mainly consists of shipyards, offshore engineering EPC, marine HVAC and refrigeration system integrators, and the retrofit/repair market. Gross profit margins range from approximately 20% to 35%.
