According to our (Global Info Research) latest study, the global Marine Seismic Equipment market size was valued at USD 645.2 million in 2022 and is forecast to a readjusted size of USD 1002.5 million by 2029 with a CAGR of 6.5% during review period.

Marine seismic equipment refers to a set of specialized instruments and systems used in marine exploration to study and map the subsurface structures and geological formations beneath the seabed. This equipment is commonly employed in various industries, including oil and gas exploration, environmental research, geological studies, and underwater resource assessment. The primary purpose of marine seismic equipment is to gather data about the Earth's subsurface by emitting sound waves (seismic waves) into the water and recording the echoes or reflections that bounce back from different layers of the Earth's crust.

Global key players of Marine Seismic Equipment include PGS, CGG, Kongsberg and BGP, etc. The top four players hold a share about 40%. North America is the largest market, has a share about 34%. In terms of product type, Ocean Bottom Seismometers is the largest segment, occupied for a share of about 20%, and in terms of application, Oil and Gas has a share about 68 percent.
