Abstracts

The global Marine Sonar Device market size is expected to reach \$ 618 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Marine sonar devices are acoustic systems used for underwater detection, positioning, and seabed mapping. They provide high-resolution imaging, precise depth measurement, and real-time data, and are widely used in navigation, marine scientific research, offshore engineering, and fisheries management. These devices play a crucial role in safe operation and environmental monitoring in complex aquatic environments. The upstream of the marine sonar device industry chain includes acoustic transducers, signal processing modules, electronic boards, waterproof housings, and embedded control systems; the midstream includes system integration, software development, calibration, and testing; and the downstream serves hydrographic surveying units, offshore engineering companies, research institutions, defense and fishing fleets, while also providing installation, commissioning, and maintenance services. In 2025, the global production of marine sonar devices was approximately 7,430 units, with a global average market price of approximately US\$56,500 per unit. The gross profit margin of major companies in the industry ranged from 45% to 60%. The global production capacity of marine sonar devices in 2025 was approximately 10,000 units.

The marine sonar device market is driven by increasing offshore activities, maritime safety requirements, and expanding ocean exploration projects. Growth in offshore energy, seabed mapping, and defense initiatives has created strong demand for high-precision sonar systems. Compared with conventional methods, modern sonar devices offer higher resolution, real-time monitoring, and integrated data analysis. Key technological trends include multi-beam systems, compact designs, and intelligent

signal processing. With continued investment in marine infrastructure and research, the market is expected to grow steadily in the coming years.

This report studies the global Marine Sonar Device production, demand, key manufacturers, and key regions.
