Marine Straight Line Wiper is a specific type of windshield wiper system commonly used in maritime and marine applications. It is designed to provide efficient and reliable clearing of windows and windshields on boats, ships, and other watercraft. Here is a detailed definition:

Unlike traditional automotive wipers with a sweeping arc motion, marine straight line wipers move in a linear or back-and-forth manner. This design is well-suited for vessels as it ensures consistent and complete clearing of the window surface, even in challenging conditions. The wiper blades of a marine straight line wiper system are attached to a mechanism that moves them horizontally or vertically. This motion pattern effectively removes water, spray, or debris from the windshield, providing clear visibility to the vessel's operator. Marine straight line wipers are typically constructed using materials that are resistant to corrosion, UV radiation, and the corrosive effects of saltwater. This ensures their durability and longevity in the harsh marine environment. These wipers are equipped with specialized motors and can be controlled using marine wiper control panels or other onboard control systems. Operators can adjust the wiper speed and activate various wiper functions as needed. Marine straight line wipers are commonly used on the windows of bridge enclosures, navigation stations, and other critical viewing areas on vessels to maintain clear visibility, especially during adverse weather conditions or when navigating through rough waters.
